# EURASIAN JOURNAL OF PULMONOLOGY

FORMERLY SOLUNUM

## Editorial

Dear colleagues,

We present the 3<sup>rd</sup> issue of 2014 of the Eurasian Journal of Pulmonology including 2 review articles, 6 research papers, and 4 case reports. As in our previous issues, there is also a case report quiz in the education section in this issue. The first review article in this issue is about approach to viral respiratory infections in patients who underwent lung transplantation. We hope that you will read this review article by Macé Matthew Schuurmans with pleasure. In the second review article, Emine Argüder et al. discussed clinical pictures related to pulmonary toxicity after radiotherapy. Research papers in this issue are about different topics such as COPD, thoracic surgery, smoking cessation, and occupational diseases. We believe you will read these papers with interest.

The Eurasian Journal of Pulmonology celebrates its 1<sup>st</sup> year of publication with this issue. I celebrate the New Year of all our readers with the hope of our journal being strengthened gradually and taking a place in the international platforms in 2015 and forthcoming years.
