

Editorial

Dear Colleagues,

On behalf of the editorial board, I am pleased to announce that the Turkish Journal of Immunology has published four research articles and a review in its latest issue.

The review article focuses on the latest advances in the molecular etiology of severe combined immunodeficiency while three research articles delve into different aspects of autoimmune diseases such as Childhood Hashimoto's Thyroiditis, Discoid Lupus Erythematosus and Lupus Nephritis. Two of these studies were conducted on humans, the third was carried on mice. Classification of common variable immunodeficiency using measurement of B-cell subsets in Moroccan patients is also discussed in another research paper.

I would like to express my sincere thanks to the researchers who shared their valuable work with our journal, and also to the Managing Editor and Assistants Editors of our journal.

We look forward to your valuable contributions for our upcoming issue and I would like to take this opportunity to congratulate everyone on World Immunology Day.

Warm Regards,
Prof. Gunnur Deniz
