

## Editorial

---

Dear Colleagues,

On behalf of the editorial board, I am pleased to share with you the August issue of the Turkish Journal of Immunology. In this issue, we include a comprehensive review article titled "*Toll-like Receptors and Diabetic Nephropathy: A Review of Recent Advances*", written by distinguished researchers from Iran. This comprehensive review examines the latest discoveries surrounding the role of Toll-like receptors in diabetic nephropathy, providing a review of current knowledge and shedding light on future research directions in this important area of immunology.

In addition, we proudly present four original research papers contributed by scholars from Turkey, Indonesia, Iraq and Iran. These studies examine various aspects of immunology, each adding valuable insights and expanding our understanding of the field. The inclusion of these papers underscores the rich diversity of perspectives contributing to the advancement of immunology.

I would like to express my deepest gratitude to the researchers who have generously shared their valuable work with our journal. Their contributions significantly enrich our journal and provide our readers with the latest information. I would also like to extend my sincere thanks to our Managing Editor and Deputy Editors, whose dedicated and meticulous work has been instrumental in maintaining the high standards of our journal.

As we look forward to our future issues, we invite all researchers and scholars to continue contributing to our journal with their valuable work. Your submissions play a critical role in moving the scientific community forward and promoting the exchange of knowledge.

Sincerely yours,

Prof. Günnur Deniz
